THE WHITE BOUTIQUE · UAE

Chatbot Support Automation

How customer queries from social media are answered instantly by a chatbot, with a real person always one tap away.

Proposal by [Your Name] · Customer Service Manager

OBJECTIVES

What the chatbot will achieve

Instant replies

The bot answers in seconds, day and night, so no customer waits for a first reply.

Human touch kept

Every path offers a real agent, so customers never feel stuck with a bot.

Clear order status

Customers see their order status without asking anyone.

Lower cost

Agents focus on sales and complex cases, so the team scales without extra hiring.

CUSTOMER JOURNEY

Two options, and a person is always available

1 · Customer messages us

Instagram, Facebook or WhatsApp.

→

2 · Welcome menu

General Queries or Order Tracking.

General Queries

1. Customer asks a sales or pre-sales question
2. Bot gives an approved answer
3. Menu appears: continue, chat with Sales Team, or close chat
4. Closing still offers a last chance to speak to the team

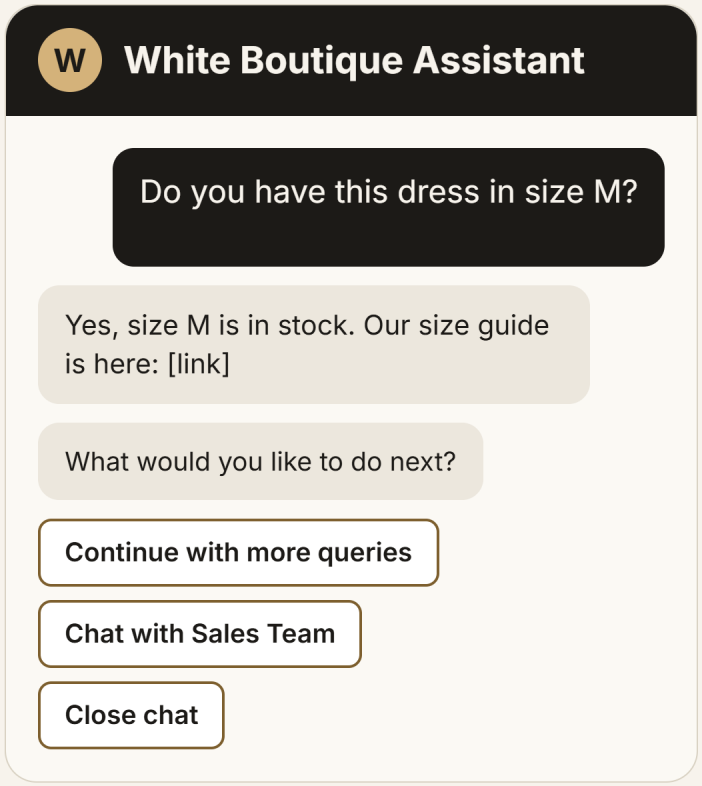

Order Tracking

1. Customer types the order number
2. Bot checks the status in the system
3. Customer sees a clear, pre-approved status message
4. Option to chat with an agent for questions, changes or cancellation

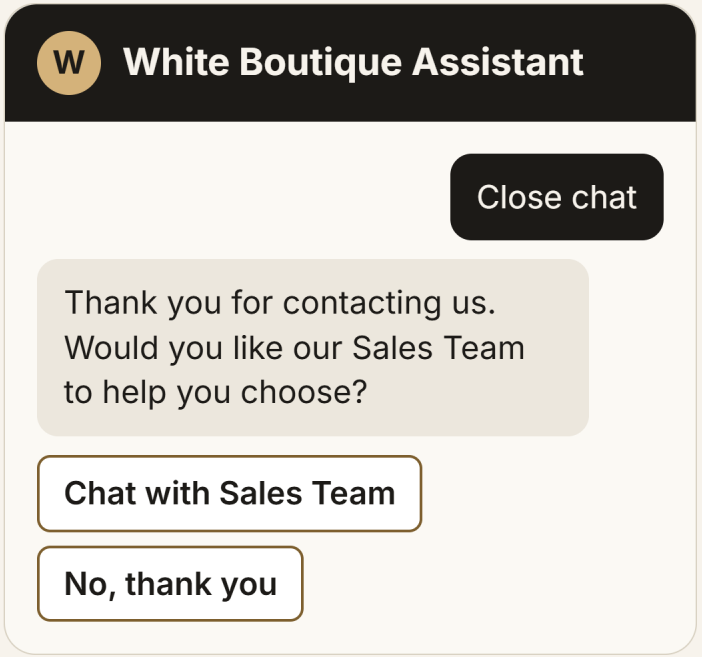

GENERAL QUERIES

Answer first, then let the customer choose

Answer and next-step options

If the customer closes the chat

Approved answers

Pre-sales questions are answered from a checked FAQ in Arabic and English.

Options after every answer

The menu appears at once, so the customer is never left guessing.

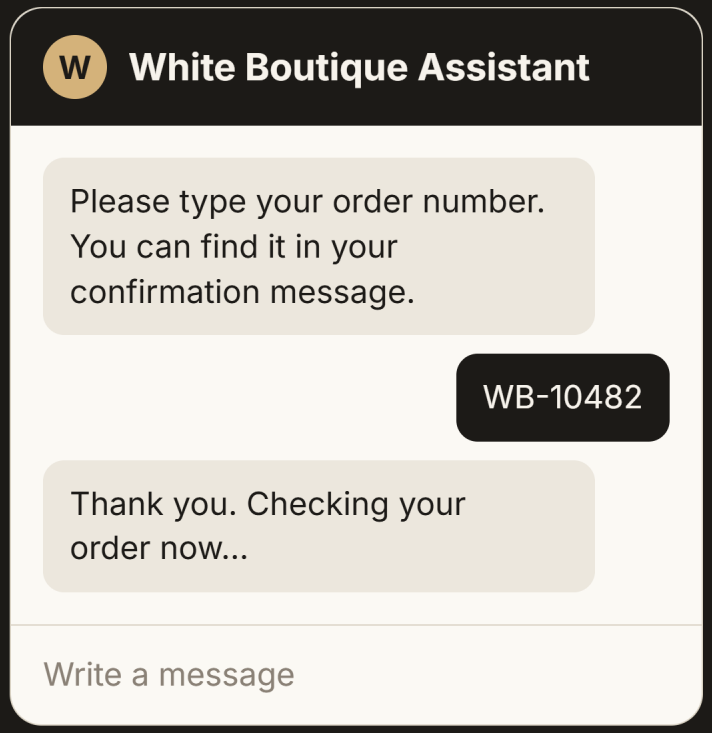

Closing is never cold

A last invitation to the Sales Team and a quick rating keep the relationship warm.

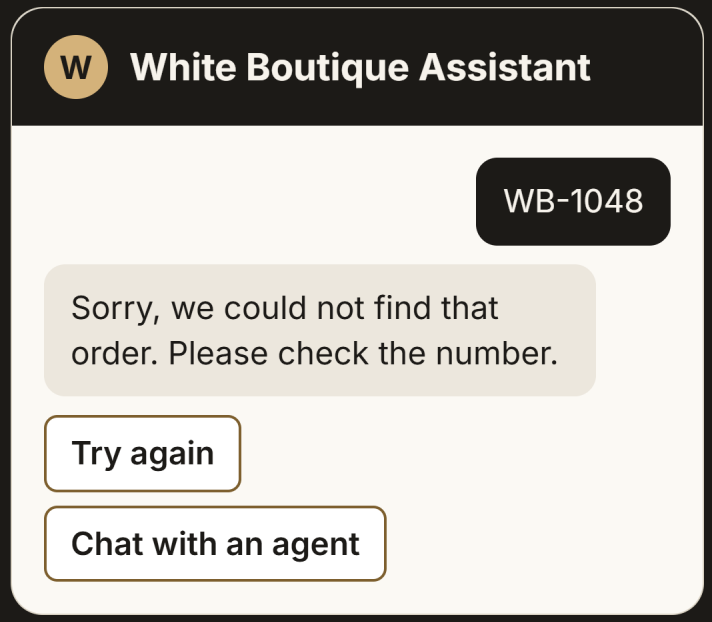

ORDER TRACKING

The customer enters the order number

Step 1: order number

If the number is not found

Simple input

The customer only types the order number from the confirmation.

Live check

The bot looks up the status on the server in seconds.

Never stuck

After two failed tries the bot offers an agent.

ORDER STATUS REPLIES

Clear answers, always ending with an agent option

In queue (automatic)

W White Boutique Assistant

Order WB-10482
Status: In queue
Usual time: 24 to 48 hours
Need a change or cancellation?
Tap below.

- Chat with an agent
- Track another order

In process (team update)

W White Boutique Assistant

Order WB-10482
Status: Being prepared
Update: packed, ships today by 6 PM
Need a change? Tap below.

- Chat with an agent
- Track another order

Dispatched (suggested)

W White Boutique Assistant

Order WB-10482
Status: Out for delivery
Arrives today, 4 PM to 8 PM
Need help? Tap below.

- Chat with an agent
- Track another order

STATUS CONTROL

How each status reaches the customer

Status	What the customer sees	Updated by
In queue	General time frame, for example 24 to 48 hours	Automatic from the system
In process	Fixed message plus the time or note typed by the team	Order management team
Dispatched	Courier name and tracking link	Order team or courier feed
Delivered	Confirmation and a rating request	Automatic
Issue or delay	Apology, then direct handover to an agent	Order team flags it

Fixed wording stays pre-approved. The order team only enters the status and the time.

AGENT HANDOVER

From bot to person, without repeating anything

Customer taps

Chat with an agent is available on every screen.

Smart routing

General queries go to the Sales Team. Order questions go to the Order Team.

Context passed

Chat history, order number and status appear for the agent.

30-minute promise

Chat is assigned at once, with reminders and escalation if unanswered.

Outside working hours

The bot shares opening times and records the request, so the first reply comes early next morning.

BEHIND THE SCENES

How the bot gets order data safely

Customer chat
Instagram, Facebook, WhatsApp

→

respond.io workflow
Menu, questions and replies

→

Secured order API
Read-only link to the data

→

Order database
Holds order status and time

→

Order team form
Simple status and time update

Secure

Read-only access. Order number plus phone number checked first. No payment details.

Simple for the team

One short form or sheet for status and time. No technical skill needed.

Cost-effective

Uses respond.io features already in place. Only a small API link is new.

IMPROVEMENTS

Six ways to make the bot better

Arabic and English menu

Customers choose a language first.

Never a dead end

If the bot misunderstands twice, it offers an agent.

Identity check

Order number plus phone number before sharing details.

Proactive updates

Status messages sent automatically cut repeat questions.

Rating after every chat

A quick score measures bot and agent quality.

Weekly improvement

Review unanswered questions and update the bot.

IMPLEMENTATION PLAN

Proposed six-week rollout

Weeks 1–2 · Design

- Finalise FAQ answers in two languages
- Agree order statuses and wording
- Map the agent handover rules

Weeks 3–4 · Build and test

- Build menu and flows in respond.io
- Connect the order API
- Test with the support team

Weeks 5–6 · Launch

- Go live on one channel first
- Extend to all channels
- Review results every week

Targets: bot reply under 1 minute, order status answered without an agent, agent option on every path, agent replies within 30 minutes.

NEXT STEP

Details to confirm before building

Business

- Which channel goes live first?
- Working hours of Sales and Order teams
- Approved time frame for orders in queue
- Languages required

Technical

- Which system stores the orders?
- Exact order statuses and number format
- Who updates status, and how often?
- Is phone verification needed?
