THE WHITE BOUTIQUE · UAE

Customer Support Automation

A faster, smarter social media support system: every customer answered within minutes and no contact missed.

respond.io | AI chatbot | Order database link

Proposal by Chethan Kumar

WHERE WE ARE TODAY

The 30-minute promise, at scale

30 min

Maximum first-reply time promised to every social media customer.

10

Support team members working from one shared respond.io inbox.

0

Contacts we can afford to miss or leave waiting.

Why manual replies struggle

One enquiry grows into a long conversation, and many arrive at once. Peak hours, shift changes and out-of-hours messages are where delays and missed chats happen.

THE SOLUTION

One connected support system

Customer channels
Instagram, Facebook, WhatsApp, web chat

→

respond.io inbox
One unified inbox for every channel

→

Automation layer
Workflows and AI chatbot reply instantly

→

Order data API
Secured, read-only link to your order database

→

Human team
10 agents handle sales, complaints and VIPs

Bot first, human when it matters

Every message gets an instant answer. Agents spend their time on sales, problem solving and premium service.

CHATBOT SCOPE

What the bot handles, and what it passes on

Level 1 · FAQ answers

- Store hours and locations
- Delivery areas and fees
- Payment options
- Returns and exchange policy
- Size and care guidance

Level 2 · Order management

- Order status and tracking
- Delivery date and time slot
- Order contents and address
- Return or exchange progress
- Live data from your database

Level 3 · Human handover

- Complaints and refunds
- Custom or bridal orders
- VIP customers
- Anything the bot cannot solve
- Full chat and order details passed on

Arabic and English from day one.

ORDER MANAGEMENT BOT

Live order answers from your database

1
Customer asks
"Where is my order?" arrives on any channel.

2
Bot verifies
Asks for the order number and checks the phone number.

3
Secure lookup
respond.io calls a read-only order API linked to the database.

4
Instant answer
Status, courier, tracking link and delivery estimate.

5
Smart handover
Delayed or missing orders go to an agent with details attached.

Read-only access

Identity check first

No payment data

Audit log of lookups

The bot never touches the database directly: a small secured API sits in between, designed with UAE data protection rules (PDPL) in mind.

TEAM MODEL

Organising the 10-person team

6

Front-line chat agents

Social inbox, product questions and sales help.

2

Order and delivery desk

Tracking issues, delays, returns and exchanges.

1

VIP and escalations

High-value clients, complaints and special requests.

1

Quality and knowledge

Reviews chats, updates the bot and saved replies.

Routing rules

- Least-busy online agent gets each new chat
- Arabic or English skill match; VIP and repeat buyers prioritised
- Shifts planned around real peak hours

Proposed split, to be confirmed against actual chat volumes.

ZERO-MISS SAFETY NET

Escalation ladder inside the 30 minutes

0 min
Bot replies

Instant answer, day or night.

2 min
Auto-assign

Least-busy online agent gets the chat.

10 min
Reminder

Agent and team lead are alerted.

20 min
Escalate

Supervisor takes over or reassigns.

30 min
Breach alert

Logged, reviewed, holding message sent.

Out-of-hours auto-reply

Unassigned-chat alert

Daily open-chat audit

Timings are proposals, tuned after the first month of data.

OPTIONS COMPARED

The most cost-effective route

A · Hire more agents

- Cost: high, grows with volume
- Speed: slow, hiring and training
- Risk: every reply still needs a person

B · Custom-built bot

- Cost: high upfront
- Speed: slow, months to build
- Risk: new system to maintain, separate from respond.io

C · Optimise respond.io + order API

- Cost: low, existing platform
- Speed: fast, live in weeks
- Risk: low, same tools for the team

Recommended: option C. Pricing to be added after review.

MEASURING SUCCESS

Proposed KPIs and targets

< 1 min
First reply by the bot

< 10 min
First reply by a human agent

100%
Chats assigned, none left unowned

95%+
Replies inside the 30-minute SLA

Also tracked

Bot resolution rate · customer satisfaction (CSAT) · average resolution time · peak-hour volume

Baseline measured in week 1, then reviewed weekly on a live dashboard.

ADDITIONAL RECOMMENDATIONS

Six ways to go further

Proactive order updates

Automatic shipped and out-for-delivery messages mean fewer “where is my order” chats.

Saved reply library

Approved Arabic and English answers keep replies fast and consistent.

CSAT after every chat

A one-tap rating shows service quality and flags problems early.

Peak-season playbook

Extra rota and templates ready for Ramadan, Eid and White Friday.

Weekly bot review

Check questions the bot missed and train it so it improves every week.

Training and QA scoring

Chat reviews and coaching keep the tone premium and on-brand.

IMPLEMENTATION ROADMAP

From audit to optimisation in 90 days

Days 1–30 · Foundation

- Audit chat history and top questions
- Set up routing, SLA timers and saved replies
- Define KPIs and dashboard

Days 31–60 · Automation

- Launch the FAQ bot
- Connect and test the order API
- Add out-of-hours and handover rules

Days 61–90 · Optimisation

- Train the team and score quality
- Review KPIs every week
- Expand bot scope and proactive updates

Each phase ends with a short review so management sees progress and results.

MY COMMITMENT

A support team that is fast, consistent and never misses a customer

Own the results

Accountable for reply times, quality and satisfaction.

Build with the team

Hands-on setup, training and coaching for all 10 agents.

Report openly

Weekly numbers on speed, volume and improvements.
